

I am alarmed at the data I am seeing on the interference potential for licensed Amateur Radio communications that would be produced by BPL. I have been an amateur over 30 years, and have participated in public service and emergency communications throughout my entire amateur career. Our service potential to this nation would be severely diminished, if not destroyed, by BPL interference. I have participated in emergency communications on HF frequencies that have saved lives and property; these would not have been possible if BPL was active in my neighborhood. Please consider the greater good of this nation and do not allow Broadband over Power Lines!
